General Advice:

Poison information centers in each State capital city can provide additional assistance for scheduled poisons (13 1126). Ensure that medical personnel are aware of the material(s) involved and take precautions to protect themselves.

Skin Contact:

Wash off immediately with soap and plenty of water removing all contaminated clothes and shoes. Get medical attention. If skin irritation persists, call a physician.

Eye Contact:

Flush eye with water for 15 minutes. Get medical attention.

Inhalation:

Move to fresh air. If not breathing, give artificial respiration. If breathing is difficult, give oxygen. **WARNING!** It may be hazardous to the person providing aid to give mouth-to-mouth resuscitation when the inhaled or ingested material is toxic, infectious or corrosive. Do not use mouth-to-mouth resuscitation if victim ingested or inhaled the substance; induce artificial respiration with the aid of a pocket mask equipped with a one-way valve or other proper respiratory medical device. Symptoms

Skin Contact: Causes skin irritation and possibly burns particularly if the skin is moist or wet. May cause deep penetrating ulcers of the skin.

Eye Contact: Causes serious eye irritation. Causes eye burns.

Inhalation Inhalation of dust may cause respiratory tract irritation. May be destructive to tissue of the mucous membranes and upper respiratory tract. May cause chemical burns to the respiratory tract. May cause delayed lung injury.
Acute inhalation may result in spasm, inflammation and edema of the larynx and bronchi, chemical pneumonitis, cyanosis (a bluish discoloration of skin due to deficient oxygenation of blood), and pulmonary edema. Symptoms may include a burning sensation, coughing, choking, tightness in chest, wheezing, shortness of breath, laryngitis..

Ingestion Fatal if swallowed. Causes severe digestive tract irritation and possibly burns with hemorrhagic gastroenteritis, nausea, vomiting, abdominal pain, salivation, salty or soapy taste in the mouth, dehydration and thirst, loss of appetite, muscle weakness. It may affect behavior/central nervous system (central nervous system depression, headache, excitability, tremors, convulsions, lethargy, coma). May cause congestion, and edema in various organs, severe and permanent damage to the digestive tract, and circulatory failure, shock, respiratory arrest, and vascular collapse. Fluoride ion can reduce serum calcium levels possibly causing fatal hypocalcemia, hypomagnesemia, metabolic and/or respiratory acidosis, and sometimes hyperkalemia..

Aspiration hazard No information available

Delayed and immediate effects as well as chronic effects from short and long-term exposure

Chronic Toxicity Chronic or prolonged exposure from inhalation or ingestion of fluoride dusts, vapors or mists may cause Fluorosis (chronic fluoride poisoning) and may also affect the blood serum composition and red blood cell count. Fluorosis is characterized by weight loss, weakness, anemia, brittle bones, and stiff joints. Other musculoskeletal effects may include teeth discoloration/mottled enamel, tendon calcification, and osteosclerosis.. Chronic inhalation may also result in perforation of the nasal septum..
