Methyl-t-Butyl Ether, GR ACS, also known as MTBE or tert-butyl methyl ether, is used to raise the octane number as an oxygenate. As an ACS grade quality reagent, its chemical specifications are the de facto standards for chemicals used in many high-purity applications and typically designate the highest quality chemical available for laboratory use. The GR ACS brand is an EMD Chemical trademark and indicates this chemical reagent is suitable for use in analytical chemistry and that the product meets or exceeds American Chemical Society (ACS) requirements.
Shipping & Storage

Shipping Information

DOT: UN2398, METHYL TERT-BUTYL ETHER, 3, PG II

Largest individual container shippable via: Tariff No. 2811.11

Health Hazard: 0
Fire Hazard: 0
Reactivity: 0
